What are Cookies?

Cookies are small files that websites store on a user's device when they visit the site. They are used to remember user preferences, login information, and other settings. There are two main types of cookies: session cookies, which expire when the user closes their browser, and persistent cookies, which are stored on the user's device for a longer period of time. Cookies can be used for a variety of purposes, including improving website performance, providing personalized content, and tracking user behavior for analytics purposes.

Writeup→ Firstly, my goal was to find a value in each type of cookie , so I used Burp Suite and Intruder to execute a brute-force attack in order to find the correct value. After some trial and error, I successfully found the flag in the value of 18.
